Application for the cashier of the block.

Every cashier has to register. So there should be a registration form and also a sign in form.

After a cashier is signed in his profile he can see a few pages.

A page with all people in the block. At the end of the list of people there is a button "Add new". It redirects to a form where every cashier can add an owner of an apartment in the block (Example fields: name, apartment, email).

A page where the cashier can see all payments that should be made and also a button for a new payment. In the new payment form the cashier choose a person and what he is paying (There is a payment for elevator, stairs, electricity and repairs).

After the payment is done an email is send to the apartment owner.

After the bill is payed it is refreshed in the page.

The data is saved in a database.

Work to do:

- Registration form
- Sign in form
- Page with list of people (Probably presented in a table)
- Add new person form
- Page with payments that should be made
- Add new payment form
- Connection to database
